CONTENTS

Large working area in a small footprint

With a footprint of 5.7m² (UC250x), the UC Series is the most compact machine in its class on the market.

High rigidity LM roller guideways

The UC Series are equipped with Ø45 mm wide LM roller guideways, which features higher load capacity and greater rigidity even at high acceleration.

Superior surface finish

Intelligent Spindle Thermal Compensation (*i* Spin I™) controls the heat generated during machining. The predictable spindle growth will be automatically compensated for the temperature changes and guarantees a high precision cutting performance.

UC Series

The Takumi UC Series 5-axis vertical machining center are designed for high precision finishing of small and medium size part in market such as dynamic die and mold, automotive, aerospace, medical applications and job shops. In a compact footprint, the UC series can accommodate workpieces up to 430mm in length and 200kg in weight.

The UC Series has an extremely robust structure to ensure enough stiffness to perform semi-finishing and finishing and offer the ideal dynamic, speed and acceleration at a competitive price.

Takumi console operation panel with 15-inch touch screen and dual screen (optional).

Robust one-piece casting bed

Integrated bed frame ensures high rigidity and excellent vibration absorption compare with separate structure providing excellent surface finishes.

The base width provides stability for large table loads and the increased weight absorbs the inertia of high rapids and fast cutting speeds.

High rigidity structure

Bed, columns, saddle and other main castings are made of Meehanite grade cast iron and remove the internal stress by heat treatment to ensure the best structural stability and positioning accuracy.

Hand scraping

Accuracy is ensured by hand scraped contact points. Contact surfaces such as column to base components, spindle cartridge to spindle housing, ball screw bearing block seats to bearing retainer and worktable to linear guide trucks and motor seat.

Hand scraping results in better mating surfaces of key components and will provide consistent results over a longer period of time.

01

UC Series
Frame

UC Series Spindle 02

High speed direct drive spindle

The high-power direct drive spindle limits vibration, noise and power loss during high speed rotations to achieve superior part finish.

Dual surface contact design

The BIG-PLUS spindle system ensures superior finish thanks to simultaneous fit of taper and flange spindle.

Stable Spindle Cooling Circulation option

Spindle temperature is constantly controlled by oil chiller. Our test results have proven that the temperature of the circulating oil is controlled within certain variation which minimizes thermal displacement during continuous operation at high speed.

Spindle Power - Torque Curve

15,000rpm Direct drive spindle

(Spindle motor: Fanuc w/o CTS)

9/15 kW
Power (Cont./S3-25%)

57.3/119 N.m
Torque (Cont./S3-25%)

15,000rpm Direct drive spindle

(Spindle motor: Heidenhain with, w/o CTS)

10/14 kW
Power (Cont./S6-40%)

63.7/89.4 N.m
Torque (Cont./S6-40%)

Double Anchored Ballscrew

To eliminate lost motion, the ballscrews are anchored on both ends and pre-tensioned. The motors are directly coupled to the ballscrews.

Roller Type LM Guideways

The new UC Series (UC320.x) are equipped with Ø45 mm wide LM roller guideways. These features higher load capacity and greater rigidity even at high acceleration. Additionally, they have greater contact area to support faster feeds, higher rigidity and higher weight bearing capability.

Premium Ballscrews

UC Series are equipped with high precision ballscrews, featuring high load capacity while also providing high durability and rigidity during heavy duty cutting.

High-Accuracy Linear Scales option

Linear scales are optional on all 3 axes. Mounted to the table, cross rail and head they take a direct reading of the true position of the axis. This compensates for thermal growth, mechanical flex and backlash, for improved accuracy and repeatability during the life of the machine.

03 UC Series Feed Axis

UC Series Rotary Table

04

High Performance Rotary Table

The UC Series has a tilting rotary table which is designed to present high performance in high speed machining. The table is having high mechanical strength with worm shaft and worm wheel design which ensures superior accuracy and fine surface finishes.

- **UC250 $\times$ A/C rotation range: $+30^{\circ} \sim -120^{\circ}/360^{\circ}$**
- **UC320 $\times$ A/C rotation range: $+30^{\circ} \sim -120^{\circ}/360^{\circ}$**
- **UC250 $\times$ A/C rotation speed: 22.2/33.3 rpm**
- **UC320 $\times$ A/C rotation speed: 16.7/22.2 rpm**

Maximum workpiece size (Wd x Wh)

UC250 $\times$	Φ 310 x 250mm
UC320 $\times$	Φ 430 x 300mm

Maximum workpiece weight

UC250 $\times$	100kg
UC320 $\times$	200kg

A/C-Axis Rotary Encoder as Standard

Both axes are equipped with Heidenhain rotary encoders for precise ± 5 arc-second positioning accuracy.

The rotary axes deliver twice the accuracy of competitive machines to achieve greater accuracy performance when machining away from the center of rotation.

Ergonomic Design

Shorter access to the table make setup work such as fixture adjustment and maintenance easy.

- Distance to the center of the table:

- Distance from floor surface to pallet surface:

Ergonomic Swivel Operation Panel

The operation panel can swivel 90°, and the height is designed to be at the operator's viewpoint.

Effective Chip Removal Solutions

High pressure coolant through spindle and other chip removal solutions help wash away chips from hole drilling, tapping and other machining in the cavity. In addition, machining points can be cooled and extend the life of the tool.

Large Door Opening

Large door opening to the working area gives the operator impressive freedom and handling space.

Powerful Takumi PC Console

The powerful, cutting-edge operation system, Takumi PC console, ensures optimal efficiency and productivity with a variety of intelligent functions. It brings your machining operation experience to the next level by integrating Window 10 PC with Fanuc CNC system on a 15-inch touch screen.

Takumi console operation
panel with 15-inch touch screen and dual screen (optional).

User-friendly Programming

Visualize workpieces by inputting 3D model.

Smart Profile Editor

Create contour intuitively.

Easy Tilted Plane Programming

More efficient machining experience with built-in events.

- Support 3D IGS/STEP or 2D DXF file input. DXF files can be directly opened on the CNC and transferred to the CNC program at a simple click.
- Conversational Event Based Programming allows making part programs by simply choosing machining events and configuring its parameters, without having to write G-Code.
- Quick and simple path creation of geometric profile. Enhance efficiency by automatic calculation of drawing the contour. (E.g. The connection between line and circular arc)
- Set work plane origin by manual Input, Teach, or 3D Model Import to program a tilted plane part easily.

Built-In Events

Built-in events function keeps unproductive times to an absolute minimum.

5-Axis Simulation

Realistic simulation for reliable production process.

Realization of Machine Monitoring

Higher machine utilization thanks to machine monitoring.

- Built-in event includes standard drill, bore, tap, contour, pocket, helix, pattern, setup, and auxiliary events.
- Realistic simulation enables verification of the NC program before machining.
- Prevention of machine collision and downtime.
- Status display of machine data and its analysis can be used to minimize machine down-time.
- Provides 4G and network interfaces to collect machine data for dashboards or ERP/MES systems. Supports MTConnect, OPC-UA, FTP, HTTP, or WebSocket Web services.

- Seamless Integration of Win10 PC with FANUC CNC system, combining user-friendly operation, custom apps, and control accuracy.
- Allows visual inspection of generated tool paths and final dimensions.
- Enables ISO/EIA G-Code editing for writing standard G-Code part programs or to fine tune CAD/CAM posts.

- Use job-folder and files to manage the production sequence. The job-folder contains NC program, SOP, and production quantity. Once the machine completes the production quantity, it automatically switches to the next job schedule.
- Provide management tool to manage the tool type, size, life and location (Machine magazine or Inventory). System automatically captures the number and the life of the tool.
- Provide simplified parameters and quickly setting for different machining conditionend.
